**Fibre & Fertility on Frame**

# Mini Auction - Pen D

## Measured Performance Data

**Tag** - Visual individual identification

**Sire** - Sire of ram (see sire summary)

**Mic** - **Micron** is the average thickness of fibres in a wool sample

**S.D.** - Standard deviation is a measure of the variation of the thickness of the fibres tested. The figure quoted in microns is the range below and above the **Mic value** that approximately 68% of the fibre tested fall into.

**C.V.** - Co-efficient of Variation of **Fibre diameter** a measure of the variation of the thickness of fibres tested, but is expressed as a percentage of the fibre diameter

**%>30u** - Prickle factor is the percentage of fibres stronger than 30 microns in a sample

**GFW%** - Greasy fleece weight as a percentage of the sale rams

**BWT** - Body weight in kilograms

**EMD** - Eye muscle depth in millimetres

**FAT** - Fat depth measured in millimetres

## Australian Sheep Breeding Values (ASBVs)

MERINOSELECT is delivered by Sheep Genetics and information is calculated from an analysis of pedigree and performance information contained in MERINOSELECT database. An Australian Sheep Breeding Value is an estimate of the genetic potential a sheep will pass on to its progeny. Sheep are ranked for various production characteristics using the Australian Sheep Breeding Values (ASBVs). **ASBVs are designed to be used in conjunction with the visual selection methods to select sheep that match your breeding objectives**

**Yearling Clean Fleece Weight (Ycfw)** - A positive Fleece Weight ASBV means a genetically heavier cutting animal. Fleece weight ASBVs are quoted in percentages. ASBVs are deviations from the average of the animals in the database in the 1990 drop. An ASBV of +20% means the animal will cut 20% more wool than the average in 1990. A ram with an ASBV of +20% will pass half of this benefit onto his lambs, that is +10%.

**Yearling Fibre Diameter (Yfd)** - Fibre diameter ASBVs are quoted in microns and are expressed as the deviation from the average of animals in the database in the 1990 drop. The more negative the number the finer the animal. An ASBV of -1.6 means the animal will produce wool that is 1.6 micron finer than the average in 1990. A ram with an ASBV for FD of -1.6 will pass half of this benefit onto his lambs, that is -0.8.

**Yearling Staple Length** - Staple length ASBVs are quoted in millimetres and are expressed as the deviation from the average of animals in the database in the 1990 drop. An ASBV of +10 means an animal will produce wool that is 10mm longer than the average in 1990. A ram with an ASBV for staple length of +10 will pass half of this benefit onto his lambs, that is +5.

**Yearling Weight (Ywt)** - Weights are measured in kilograms and ASBVs are quoted in kilograms. ASBVs are deviations from the average of animals in the database in the 1990 drop. So an animal with a Ywt ASBV of +6kg will pass half of this benefit onto his lambs, that is +3kg.

**Yearling Fat (Yfat)** - Fat ASBVs are measured and quoted in millimetres. They are deviations from the average of animals in the database in the 1990 drop. An animal with a FAT of +0.6 will genetically have 0.6mm more subcutaneous fat than the average in 1990. A ram with an ASBV of +0.6 for FAT will pass half of this benefit onto his lambs, that is +0.3mm

**Dual Purpose + (DP+)** - This index ranks animals on their ability to produce Merinos for a dual purpose operations. It is for a self replacing Merino flocks that do not keep their wethers and also join a portion of their ewes to terminal sires for lamb production.

21/07/2019 Australian ASBV averages
